

# linTERMINAL for palletising

Simply better palletising.

From  
7 EUR/hour  
with pay-per-use  
possible

## HIGHER SPEED

Synchronised movements in the vertical axis and optimised spatial movements make palletising up to 30% faster.

## INFINITY RANGE

When using the horizontal axis, almost any number of pallets can be (de)palletised by one cobot.

## EASE-OF-USE

Each palletiser can be easily programmed via the integrated touchscreen of the linTERMINAL.

## INTELLIGENT SOFTWARE

With the help of our palletising software, a simulation is performed before out in advance for each task.

## SEAMLESS INTEGRATION

Compatible with a wide range of cobots and robots, including larger models with higher payload.

## READY-TO-GO

The linrob palletiser is delivered within a very short time. The only thing that is even faster is setting up the entire system.

## (DE)PALLETISING

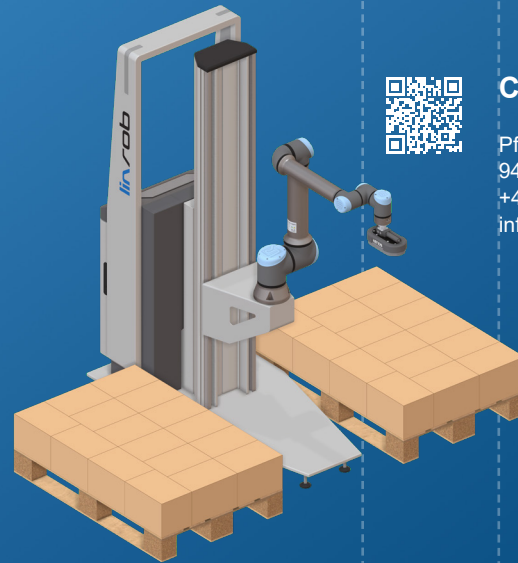

- Optional linkable safety technology.
- Integrated LED strip always provides visual feedback and serves as a signal light.
- Optional compressed air port.
- Within a few minutes, the system is fully programmed and ready for operation.
- Each linrob only requires 230V power supply.
- Multi-box palletising is no challenge.

## HORIZONTAL PALLETISING

- Any number of pallets can be handled by one robot in the same setup.
- Mixed palletising is no challenge.

## VERTICAL PALLETISING

- Pallets can be piled up as high as desired.
- Up to 2 pallets can be (de)palletised in parallel.
- Transportable by pallet truck.
