

linTERMINAL

Simply better robotics.

EASE-OF-USE

The entire system can be programmed, taught and commissioned from a central position.

SEAMLESS INTEGRATION

Whether RE2 or RE3 as vertical or horizontal axis, linTERMINAL works for all possible combinations.

SAFETY INTEGRATED

Thanks to the plug-and-play system, the integration of safety sensor technology is easier than ever.

DIGITAL INTEGRATION

All types of control software or application software can be installed.

FLEXIBLE RANGE

linTERMINAL and linREX can be located in different positions.

READY-TO-GO

The linTERMINAL can be easily transported to its destination using a pallet truck.

SIMPLY BETTER USABLE

Whether palletising, welding, pick and place, deburring or much more: linTERMINAL offers you an easy operation of your entire system.

Thanks to the smart terminal, every linrob range extender can be integrated easily into any application. Whether vertical or horizontal, with its help every combination of range extender and cobot can be taught, programmed and controlled from one central position.

The terminal has enough space to accommodate robot controllers, additional electronics etc. Optionally, external media - such as compressed air - can be linked fully integrated to the end-of-arm tool. Different configurations allow optimal adaptation to the respective application. Storage options for teach panels and an integrated touch screen are included.
